COMMON CENTS · FINANCIAL FORECAST

Margaret's next 12 months

Retired, living on state and private pension

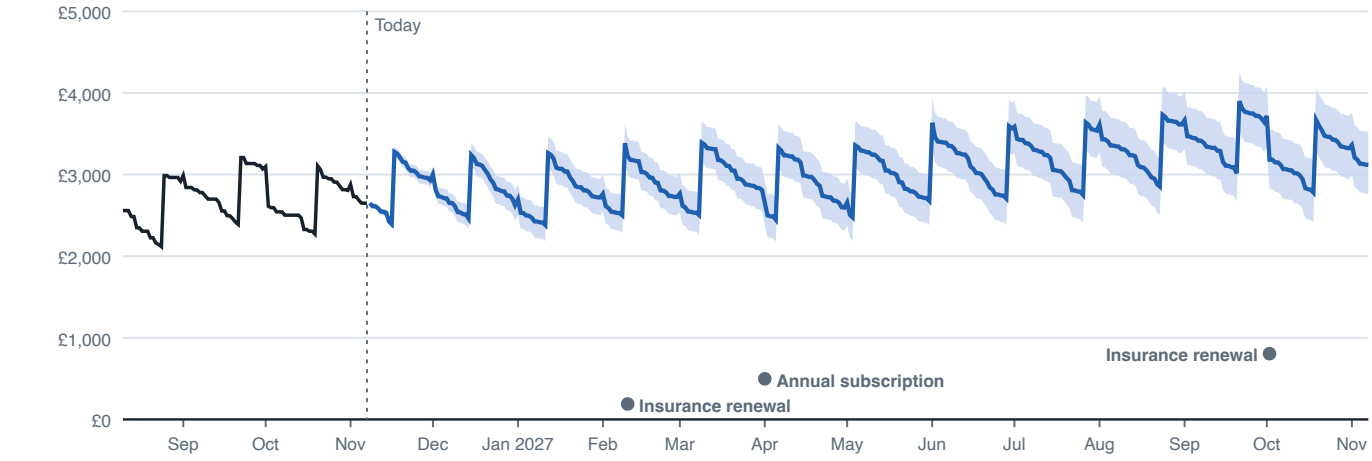

Prepared 07 November 2026
Based on 18 months of transactions
1,000 simulated futures

You could absorb a £500 surprise bill: your lowest expected balance would still be £1,882.

Answer to your biggest worry: Unexpected bills

BALANCE TODAY	IN 30 DAYS	IN 90 DAYS	HARDSHIP RISK
£2,650	**£2,653**	**£2,541**	**0%** LOW
Overdraft limit £0 · savings £14,250	likely £2,546 to £2,771 · High confidence (92%)	likely £2,326 to £2,769 · High confidence (87%)	High confidence · needs more than a £200 buffer to improve

Your balance: last 3 months and next 12 months

Actual balance · Most likely forecast · Likely range (8 in 10 futures fall here)

How to read this: the dark line is what actually happened. The blue line is the most likely path from today; the shaded band shows where your balance lands in 8 out of 10 simulated futures. The wider the band, the less certain the forecast.

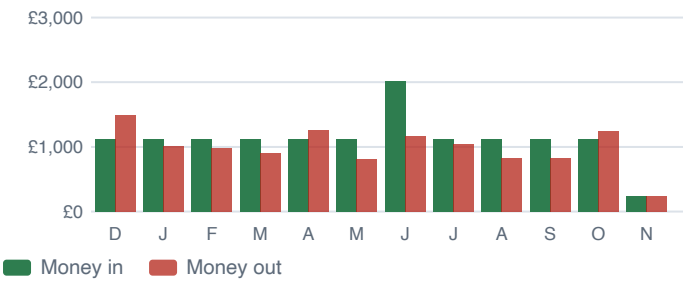

What's driving your risk

No significant risk factors found.

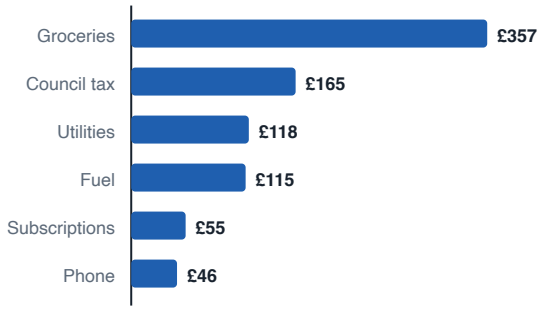

Planned life changes

None planned in the next 12 months.

Income vs spending, last 12 months

COMMON CENTS · FINANCIAL FORECAST

What could happen, and what you can do

Margaret · 07 November 2026

Your alerts

RESILIENCE · HIGH CONFIDENCE

Ready for surprise bills

You could pay a £500 surprise bill and still be fine. Your lowest expected balance would still be £1,882.

Why am I seeing this? We tested a £500 surprise bill against your forecast. Your savings of £14,250 also cover about 17 months of spending.

Try: Keep your savings easy to reach for any unexpected bills.

OPPORTUNITY · HIGH CONFIDENCE

Your savings could earn more

Your savings earn a very low rate. A better easy-access account could earn you about £570 more a year.

Why am I seeing this? £14,250 is earning 0.5%, while some easy-access accounts pay around 4.5%.

Try: Compare easy-access savings accounts so your money stays easy to reach.

FORECAST · HIGH CONFIDENCE

December will cost more

Last December you spent more than usual. This year it could be about £420 to £630 extra.

Why am I seeing this? Your December spending was about £525 higher than a typical month last year. Your energy bills also rose last winter.

Try: Set aside some money in November for December's extra costs.

FORECAST · MEDIUM CONFIDENCE

Bigger bills next year

Your RAC Breakdown renewal is likely around February. Your TV Licence is likely due around April.

Why am I seeing this? You paid RAC Breakdown £128 and TV Licensing £174 at these times last year.

Try: Note these dates on your calendar so they are not a surprise.

Written by Claude from the forecast data above.

Stress tests: lowest expected balance

SCENARIO (NEXT 90 DAYS)	BELOW £0	PAST OVERDRAFT
Forecast as is	0%	0%
£500 bill tomorrow	0%	0%
No pay for 2 months	0%	0%

YOUR GOAL: RETIREMENT

Your pension covers your spending each month.

Target: Make income last

Your answers: Retirement · Unexpected bills · No life changes · £500 bill: Savings

COMMON CENTS · FINANCIAL FORECAST

Coming up, and ways to get ahead

Margaret · 07 November 2026

How this forecast was made. We found your regular income and bills from payment patterns, then simulated 1,000 possible futures, drawing day-to-day spending from your own history with seasonal effects (for example Christmas) and inflation. Risk scores combine the forecast with trends in your overdraft use, savings, income and bills; every factor is listed above. Economic figures and life-event costs are estimates and are listed in the data.

COMMON CENTS · FINANCIAL FORECAST

Your plan

Margaret · 07 November 2026

Smallest changes with the biggest effect

Your forecast looks healthy. No changes needed to stay on track.

Greedy search over 1,000 simulated futures: each round adds the change with the biggest risk reduction per unit of effort.

SAFE TO SPEND

£277 a day

You have plenty of room: your usual £15 a day is well covered until 17 Nov, with an 80% chance of staying above £0.

Next few days of bills and income

DATE	WHO	AMOUNT	BALANCE AFTER
Sun 15 Nov	British Gas	–£105	£2,425
Tue 17 Nov	DWP State Pension	+£885	£3,278
Fri 20 Nov	BT Broadband	–£46	£3,157
Sun 22 Nov	British Heart Foundation	–£20	£3,080
Sun 22 Nov	Sky TV	–£45	£3,080
Tue 01 Dec	Aviva Pension	+£240	£3,002

Spending patterns we noticed

- Nothing unusual.

For your stage of life (retired)

- Check whether you could get Pension Credit: many eligible people don't claim it, and it unlocks other help.
- Keep easy-access savings for bills, and compare rates on larger savings.

Support you asked for

I prefer simple explanations (you asked)

Short sentences, fewer numbers, no jargon.

Support preferences only change how information is shown. They are never used in any score or shared.

HOW ACCURATE IS THIS FORECAST?

Tested on 3 past periods: average error £82 vs £252 for the best simple guess (68% better). The 80% range contained the real balance 73% of the time.

Risk model: gradient-boosted trees trained on 1,744 simulated customers. On 582 customers it never saw, it ranked risk correctly 95% of the time (ROC-AUC 0.949), compared with 88% for a hand-written formula. **Forecast ranges** are checked by a learned model with conformal calibration: on unseen customers the 90-day 80% range held the real balance 80% of the time (simulation alone: 49%).

We re-ran the model as if it were 60, 90, 120 days ago and compared it with what really happened. Measured on the demo data, which is synthetic.
